Echocardiography is used widely and with increasing frequency for clinical diagnosis of coronary artery disease. It is considered to be the diagnostic tool of choice in patients with atypical or ambiguous clinical presentations, yet "positive" echo results frequently remain undiagnosed following physical examination or cardiac catheterization. In other words, the sensitivity of echo in "diagnosing" coronary artery disease remains unsatisfactory. A series of diagnostic accuracy trials has highlighted the essential role of selective use of echo in the diagnosis of coronary artery disease. In other words, "negative" echo results should be followed by coronary catheterization when signs of ischemia are absent or when coronary anatomy cannot be derived from transthoracic echo. "Positive" echo results should be followed by cardiac catheterization, or if necessary, coronary angiography, to establish the clinical relevance of positive echocardiographic findings. It is essential that we recognize the potential limitations of both echo and angiography in order to optimize the accuracy of diagnostic tests in the care of our patients.Q: Trouble building Spatialite ODBC driver I'm developing using the Spatialite-ODBC driver. The instructions given at the github page simply say to execute the following command in a shell (or a command prompt): conda install -c anaconda spatialite The installation goes well, but when I launch my program I get the following error: spatialite ODBC Driver ModuleNotFoundError: No module named 'spatialite' I tried running the command in the Python interpreter and I get the same error. A: It is on the conda-forge package (spatialite), so try conda install -c anaconda spatialite.
