Also I have not been able to install a built-in video driver from Intel I can not boot without a Nvidia GPU and when I start up with Nvidia GPU I can only choose Nvidia drivers.. AMD driver support is behind Nvidia in terms of game performance but AMD video driver support is friendlier for open source because it offers both a powerful ended source catalog driver and an open source Radeon driver.. Also my lshw-c screen continues to say that my system uses nouveau instead of the nvidia driver although i blacklisted in modprobe.. Unfortunately this is still the safest or maybe not the correct word say least vulnerable to install NYE Nvidia drivers in Ubuntu or Linux Mint.
